

ELECTRIC HEAT REBATES

• **Electric heat savings** - Electric heat rebates are available to Great Lakes Energy members who purchase and have installed a new geothermal or air-source heat pump system in their house served by Great Lakes Energy.

• **Do I qualify?** Rebates are available to GLE members only. One rebate is allowed per account (meter). The electric heat pump must be installed at the location where you receive electric service from GLE. Rebates will not be given until after installation at the account location. The system must meet efficiency minimums listed below to qualify for the rebate.

• **What are the rebate amounts?** The rebates are **\$250** for an air-source heat pump and **\$500** for a ground-source (geothermal) system that meet or exceed these energy efficiency standards:

Type of Electric Heat Pump	EER	SEER	COP	HSPF
Closed Loop Water-to-Air Geothermal	17.1		3.6	
Open Loop Water-to-Air Geothermal	21.1		4.1	
Closed Loop Water-to-Water Geothermal	16.1		3.1	
Open Loop Water-to-Water Geothermal	20.1		3.5	
Direct Geoechange	16.0		3.6	
Air-Source Heat Pump Split System	12.5	15		8.5
Air-Source Heat Pump Package System	12.0	14		8.0

EER - Energy Efficiency Ratio

SEER - Seasonal Energy Efficiency Ratio

COP - Coefficient of Performance

HSPF - Heating Seasonal Performance Factor

• **Where do I purchase the electric heat pump?** - Great Lakes Energy does not sell or install electric heat pumps. Please contact your local heating/geothermal contractor.

• **Can I receive more than one rebate?** No, only one rebate is allowed per residential location.

• **How do I get the rebate?** You or your contractor must fill out and return a form to our office, along with a copy of your sales receipt. We will process your rebate within 30 days provided your system meets the efficiency requirements. **Rebate request must be submitted within 90 days of installation.**

• **Are other discounts available?** Yes, an electric heat pump that meets the efficiency standards above also qualifies for a lower electric rate, which amounts to a 3 cents per kilowatt-hour discount, when a subtractive heat meter is installed. Please ask us for details.

• **Are government tax credits available?** Please consult www.doe.gov or your tax preparer for more details.

• **Are rebates available for other types of electric heat?** No, the rebates are only available for qualifying geothermal and air-source heat pumps.

Please contact Great Lakes Energy at
1-888-485-2537, ext. 8957 with questions.
